1676.

Apollo Anglicanus,

THE

ENGLISH APOLLO:

Assisting

All Persons in the right Understanding of this Years Revolution, as also of things past, present, and to come.

With necessary Tables plain and useful.

A twofold Kalendar, viz. *Julian* or *English*, *Gregorian* or *Forein* Computations, more plain and full than any other, with the Sun and Moons Rising and Setting, [illegible] with Lactuals, [illegible] Almanack.

Being the [illegible] Year.

WITH

A necessary useful Discourse of the STARS, PLANETS and AIRE.

By RICHARD SAUNDERS

Student in the Physical-Celestial Sciences.

Altra ripassar comparirà nuova figura, e fabrica stupenda
Nè Dedalo in cielo, nè Apollo, tutto crea.

Chiabrera.

LONDON Printed by *Andrew Clark* for the Company of Stationers. 1676.

presently we haveset upon Interest for in the hundred and shewing plainly how to discount any Lease in Being, and the true value of the Reversion after any number of Years.

Years	Months	Tenths		The use and explanation of this Table.	Years	Months	Tenths	
1	0	1	0	Suppose a Lease of Annuity, and right	17	10	5	3
2	1	2	9	worth each Year, in the Year	18	10	9	3
3	2	3	7	Annuity and Reversion after such a	19	11	1	4
4	3	4	6	Lease or Annuity expireth.	20	11	5	2

6	5	6	4	Suppose a Lease or Annuity	22	12	0	1
7	6	7	3		23	12	3	4
8	6	8	2	would know how many years	24	12	6	4
9	7	9	1	purchase it is worth at present	25	12	9	1
10	9	0	0	annuity, look in this Table for	26	13	0	0
11	7	10	9	ten years of the Lease in the	27	13	2	5
12	8	4	6		28	13	4	9
13	8	10	5		29	13	7	1
14	9	3	4	years purchase, and there	30	13	9	2
15	9	8	3	much part of a Year is the	31	13	11	1
16	10	1	2	Lease. H I	32	14	1	0

[illegible] the use to take of [illegible] the Reversion of a Lease or Annuity, work thus. Suppose the Lease is three years in all, you find in the first and second Table, and right hand against thirty, 13 years 9 months and two tenth parts of a Moneths purchase; this is more worth, were it in present possession. But suppose there be a Lease of five years (more or less) before your Commence: look in the Table against the five Years and there you find four Years, nine Moneths, five tenth parts, half a Moneths purchase; take that out of the sum against thirty, which is 13,9,2. 4,1,5. The remainder is 9 years six moneths, seven tenth parts of a month; and so much is the Reversion after five years worth, the remainder of thirty years. This is useful and very easie.

1. IN the 1. 2. column to the left hand, on the left hand page, you have the Numeral figures of the days of the Month.

2. In the second column you have the week days, and Dominical Letter.

3. You have all the principal and observable Saints days and feasts; the places of the Planets, and the Moon most nights and what Starr she is with, is observed; by which the Asterisms & Constellations are easily known to an ingenious eye & understan

4. The Moons place in the Zodiack every day at noon. (ding

5. The age of the Moon, by which the Tides are known.

6. The rising and setting of the Moon, every day in the year with Latitude.

7. The general state of the weather, with much care performed by the Author.

8. In the 8. column, the first on the right hand, you have the English account. In the 9. the Forein. In the 10. the Roman week days, and Sunday Letter.

11. The perfect Roman Kalendar and Saints days.

12, 13, 14, the utmost to the right hand, you have the dayly rising and setting of the Sun, with the Aspects.

A Table to find when the Moon will be full South every day this year, whereby the time of Tides is exactly known.

M.	A.	H.	b.	f.
1	18	11	49	
2	19	1	36	
3	20	2	24	
4	21	3	11	
5	22	4	0	
6	23	4	49	
7	24	5	38	
8	25	6	24

13	30	10	24	
14	1	11	12	
15	2	12	0	
16	3	12		

First find her age in the 5. column of the Almanack, which is exactly every day noted; which age seek out in one of the two columns of this Table to the left hand, against which in the third and fourth columns is the hour and minutes which shew the time of the Moons being South.

As for example, the 23. day of *March* the Moon is 19 days old, which being found in the 2 column of this Table against 4, to the left hand, it points to 4 h. 12 m. at which time the Moon is South the said 23 day of *March* 1676. *Et sic de cæteris.*

Here note, that all the increase she cometh to the South in the evening following the Sun; but in the decrease, in the morning going before the Sun.

By any Sun-dial you may know the hour of night by adding to the time of the Moon being South after, or subtracting before.

To find the time of High-water at any Coast.

First, at what time before were full Sea, and at what time the Moon will be South, for then you may edge [illegible] water at *Southampton*, *Queenborough*, and *Portsmouth*, for the South and North Moons make a High-water. But if you desire the time of Full Sea in any of the following Coasts, find the ensuing Table, find the name of the place, and see how many hours and minutes be annexed thereunto in the Column H. M. which added to the time of the Moons coming to South, gives you the time of High-water for the place required.

A Tide-Table, with the Names of the Havens.

	H.	M.
Rochester, Maldon, Aberden,	0	45
Gravesend, Romney, Rumkins,	1	30
London, Tinmouth, Hartlapool,	3	0
Frith, Leith, Dunbar, Narbon,	4	30
Newcastle, Falmouth, Hunber,	5	15
Lyn, Antwerp, Plimouth, Hull,	6	0
Bristol, Lanion, Foulness,	6	45
Milford, Bridgewater, North-[illegible],	7	30
Portland, Peterport, Hartfleet,	8	15
Dover, Yarmouth, Berwick, Dublin,	10	30
Callice, Rie, Winchelsey, Calshot,	11	15

Example.

The 23. of March this year, it is required to know the time of Full Sea at *Newcastle*: by the Kalendar over against the 23. of March, in the fifth Column, I find the Moon 19 days old, and by the foregoing Southing Table, I find the Moon South at 3 hours 12 minutes in the morning; then in the preceding Table, against *Newcastle* I find 5 hours 15 minutes, which added to 3 hours 12 minutes, the aggregate is 8 hours 27 minutes, wherefore I conclude it High-water there at 8 hours 27 minutes in the morning: so of any other.

Take notice that the Tide floweth one point of the Compass more at the Spring-Tide (which is the New and Full Moons) than at the Neap-Tides (the first and second Quarters) As also the Latitude of the Moon and Winds may alter it an hour sooner or later; let it be their providence who depend upon the Tides to make timely provision.

The Tide, like famous Humours, never rest,
Still constant in inconstancy at best.

Saturn is now occult under the Suns rays.
Jupiter riseth after midnight.
Mars is invisible, as being near the Sun.
Venus is now a most glorious evening Star.
Mercury is inconspicuous to us, being the South Hemisphere, he strives to present himself in the morning.

Saturn Shines all night, Jupiter sets after the Sun.
Venus riseth after Sun set.
Mercury now Lucifer our Eastern Morning Star being in his greatest Elong. from the Sun, will appear most beautiful and lucid at her rising casting a shadow.

Mercury under the Sun's Rays.
